

UniMate AI

AI-Powered Smart University Platform

Project Documentation

Document No.: 02

Vision, Mission & Project Scope

Version: 1.0

Prepared By

Abdullah Shabat

Graduation Project

Faculty of Information Technology

Department of Distributed Computing & Smart Device Applications

Islamic University of Gaza

Academic Year

2025–2026

Document Information

Item	Details
Project Name	UniMate AI
Document Number	02
Document Title	Vision, Mission & Project Scope
Version	1.0
Status	Draft
Prepared By	Abdullah Shabat
Language	English

Version History

Version	Date	Author	Description
1.0	(To be added)	Abdullah Shabat	Initial Version

Table of Contents

(Automatically generated in Microsoft Word)

1. Introduction

Every successful software project begins with a clear vision and a well-defined scope. These elements guide development decisions, align stakeholders with the project goals, and prevent unnecessary expansion beyond the intended objectives.

This document defines the strategic direction of UniMate AI, including its long-term vision, mission, project scope, business objectives, assumptions, constraints, and measurable success criteria.

2. Project Vision

Vision Statement

To become a modern AI-powered academic platform that transforms university education by providing intelligent, centralized, and accessible digital services for students, instructors, and administrators.

The vision of UniMate AI extends beyond solving current academic management challenges. It aims to create a platform capable of adapting to future educational needs through artificial intelligence, cloud technologies, and scalable software architecture.

3. Project Mission

Mission Statement

The mission of UniMate AI is to develop a unified academic platform that combines university management with artificial intelligence to simplify educational processes, improve communication, enhance learning experiences, and support academic success through innovative digital solutions.

4. Core Values

The development of UniMate AI is guided by the following principles:

Value	Description
Innovation	Utilize modern technologies to improve education.
Simplicity	Provide an intuitive and user-friendly experience.
Security	Protect user data and academic information.
Scalability	Design a system that supports future expansion.
Reliability	Ensure stable and dependable system performance.
Accessibility	Enable easy access across supported platforms.
Quality	Follow software engineering best practices throughout development.

5. Business Goals

The project aims to achieve the following business goals:

- Centralize academic services into a single platform.
- Reduce administrative workload.
- Improve collaboration between students and instructors.
- Integrate Artificial Intelligence into everyday academic activities.
- Support the digital transformation of universities.
- Build a scalable foundation for future educational services.

6. Project Scope

The project scope defines what will be included in Version 1.0 of UniMate AI.

Included in Scope (Version 1.0)

Authentication Module

- User Registration
- Secure Login
- Password Reset
- Role Management

User Profile

- Personal Information
- Profile Update
- Account Settings

Course Management

- View Courses
- Create Courses
- Edit Courses
- Upload Learning Materials

Assignment Management

- Create Assignments
- Submit Assignments
- View Assignment Details

File Management

- Upload Files
- Download Files
- Cloud Storage Integration

AI Assistant

- AI Chat
- Academic Question Answering
- Lecture Summarization

Dashboard

Administrator:

- User Management
- Department Management
- Reports

Doctor:

- Course Management
- Assignment Management

7. Out of Scope (Version 1.0)

The following features are intentionally excluded from the first release:

- Video conferencing
- Live classroom streaming
- Online examinations
- AI-generated grading
- University ERP integration
- Multi-language support
- Offline synchronization
- Payment systems
- Attendance using facial recognition

These features are planned for future versions after the successful completion of Version 1.0.

8. Project Boundaries

The system focuses on academic management and AI-assisted learning.

The following are outside the project's responsibility:

- Student admission processes.
- Financial management.
- Human resources.
- Payroll systems.
- Library management.
- University accounting.

9. Assumptions

The project assumes that:

- Users have internet access.
- Firebase Authentication services are available.
- Gemini API is operational.
- Supabase Storage is available.
- PostgreSQL database is accessible.
- Android devices meet the minimum supported version.

10. Constraints

Several constraints affect the project:

Constraint	Description
Time	Development is limited by the graduation project schedule.
Resources	Development is performed by a limited team.
Budget	Free or educational service plans are preferred.
APIs	AI services depend on external providers.
Internet	Most services require an active internet connection.

11. Stakeholders

The main stakeholders are:

- Students
- Doctors
- Administrators
- Graduation Project Supervisor
- University Faculty

12. Success Metrics

The success of Version 1.0 will be measured by:

Metric	Target
Successful User Login	100% for valid credentials
API Availability	≥ 99% during demonstration
Average Login Time	Less than 2 seconds
AI Response Time	Less than 8 seconds
File Upload Success	≥ 95%
User Satisfaction (Demo)	Positive evaluation by supervisors

13. Risks

Potential project risks include:

Risk	Mitigation
AI API quota exceeded	Apply request limits and caching
Internet connectivity issues	Provide clear error handling
Database failure	Regular backups
Delays in development	Incremental implementation with milestones
Security vulnerabilities	Follow OWASP best practices

14. Future Expansion

The platform architecture is intentionally designed to support future enhancements, including:

- AI Quiz Generator
- Flashcard Generator
- Study Planner
- Graduation Project Collaboration
- Smart Notifications
- Learning Analytics
- Multi-University Support
- Web Portal for Students
- Cross-Platform Mobile Applications

15. Strategic Roadmap

16. Conclusion

The Vision, Mission, and Project Scope document establishes the strategic foundation of UniMate AI. It defines the project's direction, boundaries, and long-term aspirations while ensuring that development efforts remain focused on delivering a high-quality and achievable Version 1.0.
